Application – IT Internship / Work-Study Position

Dear Sir or Madam,

I am currently a third-year Computer Science student pursuing a BUT (University Bachelor of Technology – a 3-year French university degree equivalent to a Bachelor's), Data Management track, at IUT de Montreuil – Université Paris 8. I am looking for an internship or work-study position for the 2026-2027 academic year, running until summer 2027, so that I can continue my studies while contributing to practical projects in a professional environment.

I am particularly interested in backend development, databases and data systems. During my studies, I have worked with Python, Java, PHP and SQL, along with PostgreSQL, MySQL and MongoDB, building full-stack applications and designing relational data models.

My internship at Elementum, within a generative AI agent environment (GenAI / Agentic AI), gave me the opportunity to build automations, configure AI agents for concrete business use cases, and work with the Snowflake stack and REST APIs. This experience strengthened my interest in backend and data-driven systems, and taught me to design reliable, well-tested solutions. My internship supervisor played a key role in this: with his guidance, I learned to reflect on my own way of working and to overcome my fear of taking initiative without worrying it might turn out to be a mistake. Alongside this, I have also designed a full-stack PHP/MySQL application with role-based access control, and built a data pipeline with interactive Qlik Sense dashboards for a data analysis project – combining backend development with data engineering.

Regarding my availability, I am open to either an internship or a work-study format for the 2026-2027 academic year, until the end of my BUT in summer 2027. I would be glad to align the exact weekly rhythm with your team's needs.

Reliable, curious and motivated, I would like to join a team where I can keep learning, become more independent, and contribute my skills. I would be pleased to discuss my background and the terms of an internship or work-study arrangement with you in more detail.

Thank you for considering my application.

Yours faithfully,

Kishan Patel
